

The Transtec Group Wins PCI Award for Best Custom Solution Bridge

The Transtec Group has been awarded a 2007 PCI Design Award for precast prestressed concrete pavement projects constructed in California, Missouri, and Iowa. The Transtec Group was the Specialty Pavement Engineer and worked closely with the precasters from these projects to submit the award entry.

The award was for the *Best Custom Solution* in the Bridge category, and was selected among 140 entries in 26 different categories nationwide. The Transtec Group is grateful for all of the individuals from the Federal Highway Administration; state DOTs, and precaster producers who made these projects possible.

Placing concrete in forms for the California project.

Moving a panel from the forms into storage for the Missouri project.

Installation of a panel for the Iowa bridge approach slab project.

Visit www.PrecastPavement.com for profiles of each of the winning projects.
