HIPERPAV Knowledge Base Article #HPKB-0003
Run-time error '9'

The information in this article applied to:
- HIPERPAV II – Version 3.0

Symptoms
You receive the error: Run-time error '9': Subscript out of range.

Cause
Usually, this is because the selected formats for numbers, dates, and time are different than the default formats used by English (United States). This can happen because of user-customization of the formats, or more commonly, the use of a different language. HIPERPAV II was developed for operating systems that use English (United States).

Resolution
Change the Language of the operating system to English (United States). You find this option using the following steps.

For Windows 2000:
Start – Settings – Control Panel – Regional Settings

For Windows XP:
Start – Settings – Control Panel – Regional and Language Options

Keywords: Run-time error, language
Version: 3.0
